These disorders include bleeding disorders (e.g. thrombotyticopaenia), blood vessel injury, thrombotic disorders (e.g. thrombotic occlusion of the coronary arteries), haemorrhagic disorders, coronary artery and cerebral artery diseases (e.g. stroke ischaemia), cardiovascular diseases (e.g. atherosclerosis and myocardienfarction), immunological diseases (e.g. platelet disorder) and embryonic liver disorders. Preferably they are used to prevent acture especially of the colon and liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Busfield SJ, Viller Oian MD, Kingsbury
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is given in a specification relating to an isolated nucleic acid molecule encoding a platelet membrane glycoprotein receptor glycoprotein VI (GPVI), also called TANGO 268. The GPVI polynucleotides and polypeptides and their modulators, e.g. antisense nucleic acids,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New genes encoding human platelet-expressed collagen receptor, glycoprotein VI, and its modulators, useful for preventing, tr and diagnosing hemorrhagic disorders, thrombotic diseases and immunological disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

Human anti-Fc-epsilon-R1 alpha autoantibody light chain V1-22

```
CC of which specifically binding to a TANGO 268 (also referred as glycoprotein CC vi (GPVI)) antigen. The antibodies of the invention act to decrease or CC block TANGO 268 binding to extracellular matrix components, or as a CC collagen or platelet release and aggregation blocker. The antibodies of the invention are useful for modulating proliferation, migration, CC morphology, differentiation and/or function of megakaryocytes and CC platelete, including during development e.g. embryogenesis, modulating platelete, including during development e.g. embryogenesis in cluding clarelete and platelet-endothelium interactions in CC inflammation and/or thrombosis, and modulating platelet aggregation and CC inflammation. They are also useful for modulating disorders associated CC with abnormal or aberrant megakaryocyte and/or platelet proliferation, comigration, morphology, differentiation and/or platelet proliferation, CC migration, morphology, differentiation and/or platelet proliferation, condulated by these antibodies are thrombotic disorders, cerebral CC vascular diseases (e.g. diseases including are thrombotic disorders, cerebral CC vascular diseases including angina pectoris, myocardial infarction, coronary CC pulmonary embolism, etc); coronary diseases (e.g. cardiovascular CC diseases including angina pectoris, myocardial infarction, coronary CC restencels, atterosclerosis, etc); immunological disorders, cerebral CC vascular diseases, venous thromboembolism diseases, coronary diseases a cc cand metastatic cancers. The antibodies of the invention only causes a cc methods. The present source represents a pestide sequence used to used to used to some advantages over prior art
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to a novel purified antibody comprising variable heavy (VH) complementarity determining region (CDR)1, or VH CDR3; or VH CDR3 and VL CDR3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel substantially purified antibody immunospecifically binding to TANGO 268 antigen, useful for treating bleeding disorders such as thrombocytopenia, stroke, ischemia, pulmonary embolism, atherosclerosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Busfield SJ, Villeval J, Qian DM, Kingsbury G;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying and obtaining inhibitor of a pathological process for treating e.g. autoimmunity comprises determining if a compound is capable of modulating the binding of the Fc-epsilon-R1 receptor and an autoantibody against its alpha-chain -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       allergic reactions, intrinsic asthma, drug intolerance and food intolerance), IgE mediated disease or malignancy. The compound is useful for treating a patthological process, particularly conditional autoimmunity. The present sequence represents a human recombinant anti-Fc-epsilon-Rl alpha autoantibody light chain protein sequence from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a method for identifying and obtaining an inhibitor of a pathological process. The method comprises determining if a compound is capable of modulating the binding of the Fc-epsilon-Rl receptor alpha-chain and an autoantibody against its alpha-chain. Also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 20;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2003-103348/09

                                                                                                                                                                                               g X
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid sequences of anti-adipocyte monoclonal antibody heavy chain, light chain, and heavy chain complementarity determining regions (CDR) of the cinvention. The antibodies can be used in the treatment of obesity and complementarity determining regions (CDR) of the complement of obesity and complement by related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the fat mass of an obese patient or the antibody complement mediated lysis. The antibodies binding specifically to dispocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and used in methods of diagnosis in human subjects e.g. to determine the presence of ladipocyte antigen on the surface of an adipocyte to detect or determine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese patients other than undergoing surgery to remove excess fat. Antibodies for different types of fat deposits can also be produced e.g. intractor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, character with decreased expression. N and P may be used the treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing in a patient's genome that affect the patients own production of P. Additionally, N may be used to produce the colon cancer-associated P. Additionally, N may be used to produce the colon cancer-associated P. by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB37789 represent sequences used in the exemplification of the

                                                                                                                                                                            cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent the antibodies and fragments of the antibodies described in the method
                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes novel antibodies that immunospecifically bind B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TWF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have

The antibody, designated RSVP2-5 (ATCC 69909), selectively binds to an RSV F glycoprotein epitope. DNA encoding RSVP2-5 Fd and light chain (see AAT66556-57) was isolated from a phage library prepared from the RNA of peripheral blood lymphocytes of an HIV-1 infected conor. A claimed pharmaceutical preparation comprises a carrier and antibody that includes the RSVP2-5 VH3 CDR3 (AAW16586) and condition of the entire Fd region (AAW1580), or is an Fab fragment and includes the RSVP2-5 VH3 CDR3 (AAW16582) con the entire Fd region (AAW16580), or is an Fab fragment and includes the RSVP2-5 VH3 CDR3 (AAW16590) or entire CDR3 (AAW16594), CDR2 (CDR2, CDR1 (AAW16590)) or entire CDR3 (AAW16594), CDR2 (CDR2, CDR3 (AAW16590)) or entire CDR3 (AAW16594), CDR3 (AAW16590) or entire CDR3 (CAW16598). The preparation alternatively comprises a CC carrier and a vector that includes a nucleotide sequence encoding CC the antibody. The preparations can be used for the treatment or composition of active RSV disease or infection (claimed), and may composite the condition of the condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

Antibodies PE1-1, ZM1-1, MZ1-2 and MD3-4 belong to the IgG1 clas. The cell lines producing PE1-1, ZM1-1 and ZM1-2 were deposited as ATCC HB9234, 9191 and 9192 respectively. The cell lines all behave as typical (mouse x human) x human hybridomas and produce their respective Abs in concs. ranging up to 25 mg/l in standard suspension culture. The heavy variable (VH) and light variable (LH) chains of Abs PE1-1, ZM1-1, ZM1-2 and MD3-4 were isolated and sequenced. Total RNA was extracted from 10(7) hybridoma cells of each cell line. ss DNA was synthesised using AMT-reverse transcriptase and oligo-dT as primer. PCRs were performed and amplified DNA was size selected. ss DNA for sequencing was isolated from each positive clone after superinfection with M13K07.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Monoclonal antibody; diagnosis; treatment; infection; hepatitis B; xenogeneic hybridoma; SPAZ 4; PE1-1; ZM1-1; ZM1-2; MD3-4; L03-3; IgG1 class; heavy chain; light chain; variable region.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC from the human monoclonal antibody (MAD) MD3-4. The MAD was generated by immunising humans with a hepatitis B virus (HBV) vaccine, isolating peripheral blood lymphocytes (PBL) and fusing them with a mouse/human cc peripheral blood lymphocytes (PBL) and fusing them with a mouse/human cc zmnogeneic cell line SPAZ-4. 5 cell lines were isolated: PEI-1, ZMI-1, ZMI-2, MD3-4 and LO3-3. The cell lines were isolated: PEI-1, ZMI-1, C ZMI-2, MD3-4 and LO3-3. The cell lines were inclated: PEI-1, ZMI-1, C ZMI-2, MD3-4 and LO3-3. The cell culture by protein A cromatography, size separation on Sephacryl 3300 gel and ion exchange C chromatography on Q-Sepharose. The heavy and light chains of the MADs comparated and their amino acid sequences determined. Primers were generated and used to amplify CDNA synthesised from RNA purified from C generated and amino acid) from MADs PEI-1, ZMI-1, ZMI-2 and MD3-4 care shown in AAT85838-45 and AAW24984-91. The MADs can be used to treat LBV infections in immunosuppressed patients or patients with chronic active hepatitis, especially liver transplant patients.

                                                                                                                                                        of a novel neutralising human monoclonal antibody to respiratory constructions (RSV). The antibody to designated RSVP2-5 (ATCC 6909), selectively binds to an RSV F glycoprotein epitope. CDNA encoding the RSVF2-5 Fd VH3 and light chain VL6 (see AAT66556-57) was isolated from a phage library prepared from RNA extracted from the peripheral blood lymphocytes of an HIV-1 infected donor. A claimed pharmaceutical preparation comprises a carrier and an antibody that includes the RSVF2-5 VH3 CDR3 (AAW16586) and which may calso include the VH3 CDR2 (AAW16584) and/or CDR1 or the entire Fd region (AAW16588), or is an Fab fragment and further includes the RSVF2-5 VL6 CDR3 (AAW16594), CDR2 (AAW16594), CDR1 (AAW16590) or entire RSVF2-5 VL6 CDR3 (AAW16594), CDR2 (AAW16592), CDR1 (AAW16590) or entire carrier and a vector that includes a nucleotide sequence encoding the antibody. The preparations can be used for the treatment or prophylaxis of active RSV disease or infection (claimed), and may also be used for RSV detection. The antibody binds and neutralises can be used for RSV detection. The antibody binds and neutralises

                                                                                           region (AAW14784) are provided of a novel, fully human monoclonal antibody (MAb), designated RSVF2-5, which selectively binds to the F glycoprotein of respiratory syncytial virus (RSV) and which neutralises RSV in vivo. To obtain RSVF2-5, a packaged phage library was prepd. from amplified heavy and light chain variable region clones derived from the peripheral blood lymphocytes of an HIV-1 infected donor. The phage library was panned with RSV proteins and isolated clones were sequenced. Isolated nucleic acids (AATG3417-18) can be used to produce novel polypeptides, esp. Fd or Fab fragments useful in the diagnosis of RSV disease, in methods for detecting the presence of RSV in a sample, and in the immunoprophylaxis and immunotherapy of RSV disease.

The colon cancer antigen polynucleotides, proteins and antibodies to the proteins are useful for the prevention, treatment and diagnosis of colon disorders, such as colon cancer. The polynucleotides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins may also be used to prevent diseases such as neural disorders, immune system disorders, muscular disorders, reproductive disorders, gastrointestinal disorders, wounds, renal disorders, infectious diseases, and cardiovascular disorders. AAC98764 to AAC98772 and AAB54007 represent sequences used in the exemplification of the present

                                                                                                                         as SECP-1 to SECP-44) and the nucleic acids encoding them. Also cincluded are a host cell transformed with the nucleic acid, a transgenic animal comprising the nucleic acid, an anti-SECP antibody, use of the SECP proteins in isolating agonists and antagonists of SECP activity and a method of isolating compounds which alter the expression of the SECP pucleic acid. The SECP polynucleotides and prevention of cardiovascular (e.g. atherosclerosis, hypertension, myocardial cardiovascular (e.g. atherosclerosis, hypertension, myocardial cardiovascular (e.g. atherosclerosis, hypertension, myocardial confined (AIDS), altergies, rheumatoid arthritis), cell proliferative (e.g. cancer), developmental (e.g. Duchenne and Becker muscular (e.g. cancer), davelopmental (e.g. Duchenne and Becker muscular disorders. Numerous other examples of each disorder are given in the specification. The present sequence represents a SECP protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       20-JUN-2000; 2000US-212890P.
